(54) Title: ARRANGEMENT COMPRISING A MAGNETIC-FIELD-DEPENDENT ANGLE SENSOR

(57) Abstract: In order to reduce the dimensions of the mechanical components and the number and size of the sensory and electronic components in an arrangement comprising a magnetic-field-dependent angle sensor which is effectively connected to a magnetic transmitter which is arranged such that it can rotate with respect to the angle sensor, while maintaining or improving the resolution of the output signal, the angle sensor is formed by at least one magnetoelectric converter, the electrical properties of which are dependent on the magnetic field strength but independent of the polarity of the magnetic field acting on the at least one converter. The magnetic field strength is selected such that the at least one converter is controlled in saturation.
